O/S –	Outstanding
UPR –	Unearned Premium Reserve
H1 –	First Half
Q1 –	First Quarter
Q2 –	Second Quarter

NOTE: ALL FIGURES ARE IN USD

RELEVANT RATIOS ANNUALISED

1.0 EXECUTIVE SUMMARY

Gross premium of short term insurance companies went up by 58,34% in the second quarter based on first quarter premiums. The increase can be attributable to increase in liquidity and stability in the use of multiple currencies which saw an increase in property (Fire insurance) and motor (motor insurance) prices. Motor and fire insurance are two largest classes of business underwritten by the local short-term insurance industry. However the underwriting profits were negative for the majority of the players except for a few. In general the industry did not post any underwriting profit and this attributable to increases in the cost of doing business. Many short term players are deliberately forgoing underwriting profit in order to gain market share.

Both return on equity and return on capital employed fail drastically to negative figures as companies lose values at the stock market. Short term players are also spending more to gain market share and with low levels of business companies divest in order to finance operations. This is reflected in the fall in underwriting profit on all but a few accounts.

There was a general increase in premium income for reinsurers. The solvency ratios for reinsurers were generally above 25% except for one. However the underwriting profits have fallen from US\$1,212,802 in the first quarter to US\$988,135. The fall was drastic for many reinsurers except for one player whose results moderated the deviation from the mean.

There were no major catastrophes during the period under review, at least as was made known to the Commission.

The following are some of the challenges which are facing the Short-insurance industry and the short term reinsurers therein in general:

- Operating cost
- Liquidity crunch and low capitalization
- Low market confidence
- Clarity of legislation on Indigenization and Economic Empowerment policies
- Ethical standards in the industry.

It is our hope that these challenges move out of the way to allow players to reap from the growing stability of the macro-economic environment brought about by falling inflation

Overall Performance of Short-Term Insurance Industry – The overall performance of the short-term insurance industry during the first half of 2010 shows that industry players are facing challenges to adjust to the new multicurrency environment. While there is a notable improvement in other sectors of the economy such as banking, telecommunications industry,

agriculture, mining, manufacturing and retail, the insurance industry is failing to obtain maximum benefits from the “new” stable economic environment prevailing at the moment. The financial results for the first half shows the insurance industry is facing subdued premium growth, inadequate capital levels, high operating costs, rising level of debtors, “retrogressive” competition based on pricing, deteriorating underwriting standards and low confidence among the insuring public.

Structure of the Report – This report is divided into two sections. Section A gives the financial performance of the short-term insurers. Section B will cover the financial performance of reinsurers.

SECTION A

Short-Term Insurance Companies
