ROA	-	Return on Assets
ROE	–	Return on Equity
UPR	–	Unearned Premium Reserve

Note: Unless stated otherwise, all monetary figures are in United States Dollars

Executive Summary

This report reviews the performance as well as developments that took place in the short term insurance industry during the quarter ended 31 March 2013. The number of operational insurance brokers, non-life insurers and non-life reinsurers as at 31 March 2013 was thirty (30), twenty three (23) and nine (9) respectively. The gross premium written by non-life insurers decreased marginally from \$66.88 million reported for the quarter ended 31 March 2012 to \$66.68 million for the quarter under review. On the other hand, gross premium written by reinsurers increased from \$27.59 million for the quarter ended 31 March 2012 to \$29.74 million for the period under review. Of the business generated by the insurers and reinsurers, \$31.7 million was obtained through local insurance and reinsurance brokers. Motor and fire insurance continued to be the dominant classes of business for the short term insurance industry. Amongst the operational underwriters, only two (i.e. one insurer and one reinsurer) reported capital levels which were below the regulatory minimum of \$750,000 effective 30 June 2013. Only three brokers reported capital levels which were below \$100,000. Total assets for non-life insurers, reinsurers and insurance brokers increased from a total of \$293.54 million as at 31 December 2012 to \$326.27 million as at 31 March 2013. However, the Commission is concerned with high ratios of non-profitable assets to total assets which were 64.09% and 39.61% for insurers and reinsurers respectively as at 31 March 2013. Short term insurers and reinsurers reported average net retention ratios of 49.99% and 77.13% for the quarter ended 31 March 2013. Premium remittances by brokers, insurers and reinsurers to insurers, reinsurers and retrocessionaires respectively, were not up to date as at 31 March 2013. In the case of brokers the ratio of premiums not remitted to insurers to premium written was 61.33%, while in the case of insurers the average ratio of reinsurance creditors to reinsurance premium was 106.10%. The average of retrocession creditors to retrocession premiums ratio for reinsurers was 198.64%. The profitability of both non-life insurers and reinsurers improved from \$1 million and \$2.37 million for the quarter ended 31 March 2012 to \$3.31 million and \$3.03 million respectively for the quarter under review. Insurance brokers reported profits amounting to \$0.62 million. The liquidity position of the non-life insurers as well as that of reinsurers was seriously compromised by high levels of premium debtors.

SECTION A

1. SHORT-TERM (NON-LIFE) INSURANCE COMPANIES

1.1. Update on Number of Institutions

There were twenty eight (28) registered short term (non-life) direct insurers as at 31 March 2013, the same number reported as at 31 December 2012. Of these registered non-life insurers, twenty three (23) were operational. SFG Insurance Company has since been directed to stop writing business and the Commission is proceeding to deregister it in terms of *section 22* of the *Insurance Act [Chapter 22:07]*. The Commission has also commenced deregistration of Jupiter Insurance Company (Private) Limited, Agricultural Insurance Company (AICO), and Suremed Health Insurance Company (Private) Limited following the running off of insurance policies in their books and/or transfer of the policies to sound insurers. Engagements with Export Credit Guarantee Corporation (ECGC) (Private) Limited are still ongoing and a decision will be made upon finalization of these engagements. Meanwhile ECGC remains suspended from writing new business.

1.2. Trend and Distribution of Business

For the first time since the inception of the multi-currency regime, the non-life direct insurers witnessed a shrinkage in the volume of business written as shown in Figure 1 below. This is evidenced by the marginal decrease of 0.30% in total gross premium written from \$66.88 million reported for the quarter ended 31 March 2012 to \$66.68 million for the quarter ended 31 March 2013 as shown in Figure 1 and Table 1 below. The decrease in the gross premium was mainly attributable to the decline in business generated from hail insurance from \$4.19 million for the quarter ended 31 March 2012 to \$0.37 million for the quarter under review.

Notwithstanding the marginal decline in the total gross premium written, there was significant growth in business generated from motor insurance and bonds/guarantees with gross premium generated from these business classes increasing by \$2.4 million and \$1.81 million respectively. Whilst the Commission appreciates the increase in the premium written from bonds/guarantees, we urge prudent underwriting in this class of business especially with regards to registering of security. This is in light of the fact that poor underwriting practices in this class of business was one of the major reasons which led to the suspension of three of the five institutions currently not operating mentioned in section 1.1 above.

Figure 1: Total Gross Premium Written in the First Quarters since 2010

Note: Total gross premium for the first quarter of 2009 has not been included since the multi-currency regime was introduced when the quarter was already underway

As shown in table 1 below, the decline in total gross premium written was outweighed by the decline in reinsurance premiums, a situation which resulted in the non-life insurers reporting an increase in total net premium written.

Table 1: Business Written (\$000)

	31 March 2012	31 March 2013	% Change
Gross Premium Written	66,879	66,679	-0.30%
Reinsurance Premium	35,081	33,349	-4.94%
Net Premium Written	31,798	33,330	4.82%
Net Earned Premium	23,241	24,478	5.32%

Farming and hire purchase insurance recorded the highest percentage increases in business written of 150.13% and 106.62% respectively as shown in table 2 below. The growth in business written from farming insurance is encouraging given that in recent quarters there were generally downward trends in business generated from this class. Hail and aviation insurance recorded the largest percentage decreases compared to other business classes as shown in table 2 below.

Table 2: Gross Premium Written by Class of Business (\$000)

Contribution by Class	31 March 2012	31 March 2013	% Change
Aviation	941	200	-78.74%
Bonds/Guarantee	2,720	4,533	66.65%
Engineering	5,187	4,398	-15.21%
Farming	393	982	150.13%
Fire	15,815	16,395	3.66%
Hail	4,188	368	-91.21%
Health	393	381	-2.93%
Hire Purchase	283	586	106.62%
Marine	1,552	1,330	-14.30%
Miscellaneous Accident	4,187	4,752	13.50%
Motor	23,356	25,756	10.27%
Personal Accident	5,993	6,037	0.73%
Personal Liability	688	962	39.90%
Total	66,879	66,679	-0.30%

Motor and fire insurance remained the dominant sources of business with combined gross premium written of \$42.15 million for the quarter under review. The two business classes accounted for 63.22% of total gross premium written. The other business, apart from fire and motor insurance, was mainly attributable to personal and miscellaneous accident, engineering and bonds/guarantees insurance as shown in Figure 2 below.

Figure 2: Distribution of Insurers' Gross Premium Written by Business Class

1.3. Capitalization

As at 31 March 2013 all the non-life insurers, except Excellence Insurance Company, reported capital levels which were compliant with the regulatory minimum capital requirement of \$750,000 effective 30 June 2013. Excellence Insurance Company reported the lowest capital maintenance ratio of 38.22% implying that its reported capital position is only 38.22% of the minimum of \$1.5 million required to be complied with by 30 June 2014.

As shown in table 3 below, out of the operational insurance companies, twelve (12) insurers reported capital levels which are compliant with the minimum regulatory capital requirement of \$1.5 million effective 30 June 2014, stipulated in Statutory 21 of 2013. Given the time period between 31 March 2013 and 30 June 2014, barring any capital erosion, on average the majority of the insurers look set to comply with the minimum requirement of \$1.5 million by 30 June 2014. This is also indicated by the industry average capital maintenance ratio of 159.50% that was reported as at 31 March 2013 which was significantly above the prudential benchmark of 100%. See Appendix 1C for capital maintenance ratios for all insurers.

Table 3: Reported Capital Levels for Non-life Insurers (\$)

Company	31 December 2012	31 March 2013
1. Alliance Insurance Company	3,637,339	3,614,901
2. Allied Insurance Company	750,166	793,643
3. Altfin Insurance Company	1,767,000	1,530,000
4. C.B.Z Insurance Company	1,206,630	1,286,972
5. Cell Insurance Company	3,622,892	4,221,862
6. Champions Insurance Company	1,917,222	1,220,293
7. Clarion Insurance Company	1,446,380	1,422,450
8. Credsurre Insurance Company	2,506,692	3,078,481
9. Eagle Insurance Company	2,270,963	1,993,989
10. Evolution Insurance Company	1,115,467	1,293,388
11. Excellence Insurance Company	410,776	573,261
12. Global Insurance Company	1,010,089	1,049,470
13. Hamilton Insurance Company	1,122,881	849,113
14. Heritage Insurance Company	1,258,053	1,736,331
15. KMFS Insurance Company	1,003,164	1,027,122
16. Nicoz Diamond Insurance Company	8,648,000	9,364,000
17. Quality Insurance Company	810,000	1,176,000
18. Regal Insurance Company	2,017,823	1,807,246
19. RM Insurance Company	6,728,193	7,426,509
20. Sanctuary Insurance Company	1,256,752	1,238,767
21. Tetrad Hail Insurance Company	3,031,567	3,222,316
22. Tristar Insurance Company	2,123,067	1,465,689
23. Zimnat Lion Insurance Company	3,142,664	3,636,368

Key:

	The insurer had already complied with the minimum capital requirement of \$1.5 million effective 30 June 2014.
	The insurer had complied with the minimum capital requirement of \$0.75 million effective 30 June 2013, but is yet to comply with \$1.5 million effective 30 June 2014.
	The insurer had not complied with the minimum capital requirement of \$0.75 million effective 30 June 2013.

All the non-life insurers except Alliance Insurance Company reported solvency margins which were compliant with the minimum solvency margin of 25% stipulated in *section 24(1a) (ii)* of the *Insurance Act [Chapter 24:07]* (see figure 3 below for the solvency margins for all the non-life insurers). Alliance Insurance Company which reported a solvency margin of 24.80% below the prudential minimum may have assumed risk which is not commensurate with its capital position.

The average solvency margin for the non-life insurers was 55.50% as at 31 March 2013, reflecting an improvement from 50.84% reported as at 31 December 2012.

Figure 3: Solvency Margin for Non-life Insurers

Of all the operational non-life direct insurers, the insurers shown in Figure 4 below were more reliant on debt compared to their peers as at 31 March 2013. This is evidenced by the said insurers' leverage ratios which compared unfavourably with the industry averages. The average equity to total assets and equity to total liabilities ratios as at 31 March 2013 were 31.66% and 46.33% respectively. More reliance on debt may constrain organic growth of the insurer's capital given that debt usually results in mandatory charges to the insurer's profits.

The reliance on debt is reflected by the said insurers' reported equity to total assets ratios as well as equity to total liabilities (solvency) ratios shown in Figure 4 which were lower than those reported by these insurers' peers. (See ratios for all non-life insurers in Appendix 1C).

Figure 4: Non-life Direct Insurers with Lowest Leverage Ratios

1.4. Asset Quality

The total assets for the non-life insurers continued on the upward trend since the adoption of the multicurrency regime in 2009 as shown in Figure 5 below. The upward trend was mainly attributable to the increase in the volume of business generated over the years.

Figure 5: Quarterly Trend in Total Assets since 2009

During the quarter under review, the total assets grew by 13.37% from \$153.30 million as at 31 December 2012, to 173.79 million as at 31 March 2013. The growth in total assets was mainly attributable to increases in investments and premium debtors which amounted to \$11.46 million and \$5.42 million respectively. The increase in premium debtors is a red flag to financial soundness given that the premium debtors are not readily available to settle claims and their recoverability maybe in doubt.

Some insurers have since written off the premium debtors due to failure to recover the same, a situation which resulted in significant reduction of their assets as well as their capital positions. The Commission urges insurers to be mindful of the age of their premium debtors and take proactive initiatives to write them off should their recoverability be doubtful. Maintaining premium debtors which are long overdue (say over 1 year) on the books of an insurer gives a false sense of financial soundness.

The asset base for non-life insurers, as at 31 March 2013 was skewed towards current assets, which contributed 61.88% of total assets. This is in line with the short term nature of non-life insurers. However, the current assets were mainly made up of premium debtors which accounted for 43.14%. The breakdown of assets is shown in Figure 6 below.

Figure 6: Breakdown of Short-Term Insurers' Total Assets

The Commission has noted with concern that the average ratio of non-profitable assets (i.e. non-interest (income) earning assets) to total assets was high at 64.09% as at 31 March 2013, notwithstanding the decline from 67.70% reported as at 31 December 2012 (See Appendix 1C for the ratios for all the direct non-life insurers). Such a scenario may constrain the insurers' ability to supplement cash flows from underwriting with investment income.

As shown in Figure 7 below, KMFS Insurance Company, Allied Insurance Company and Altfin Insurance Company, reported the highest ratios of premium debtors to gross premium written as at 31 March 2013 compared to their peers. The non-life insurers shown in Figure 7 below had proportions of their premium debtors in respect of business written prior to the beginning of the quarter under review i.e. periods dating back to before 1 January 2013 and aged more than three months old. This is reflected by premium debtors to gross premium written ratios which were in excess of 100% as at 31 March 2013.

In the absence of arrangements for the settlement of the outstanding premiums, such as stop orders in the case of hail and farming insurance, policyholders may not be inclined to settle the outstanding premiums especially if their policies have lapsed or expired.

With the exception of Tetrad Hail Insurance Company, all the insurers shown in Figure 7 below reported higher premium debtors to assets ratios compared to their peers. The average premium debtors to total assets ratio for all non-life insurers as at 31 March 2013 being 26.69%. High premium debtors to assets ratio may compromise the liquidity of insurers' asset bases. The industry average premium debtors to assets ratio of 26.69% is significantly above the threshold stipulated in Circular Number 2 of 2013 which requires that other assets (including premium debtors) should account for only 5% of total assets. (See Appendix 1C for the ratios of all insurers).

Figure 7: Insurers with High Premiums Debtors/GPW and Premium Debtors /Assets Ratios

Note: Tetrad Hail Insurance Company's premium debtors/total assets was better than that of other insurers not shown in the diagram.

The Commission urges all non-life insurers to take note of Circular 2 of 2013 which spells out investment guidelines applicable to the short term insurance industry. The Circular is meant to enhance protection of policyholders through alignment of the insurers' investment portfolios with the said insurers' risk-return profile as well as their liquidity requirements.

1.5. Reinsurance

The average risk retention ratio for the direct short term insurers for the quarter ended 31 March 2013 was 49.99% reflecting a marginal increase from 47.50% reported for the quarter ended 31 March 2012. The retention ratios for individual insurers ranged from 23.14% to 94.99% as shown in Figure 8 below.

Figure 8: Retention Ratios for Short Term Insurance Companies

The Commission has noted a disturbing situation whereby some of the non-life direct insurers' premium remittances to their respective reinsurers are not up to date with the average reinsurance creditors to reinsurance premium being 106.10% as at 31 March 2013. Since the ratio is above 100%, a proportion of the direct non-life insurance industry's outstanding reinsurance premium was in respect of business written prior to the beginning of the quarter.

As is usually the trend, hire purchase and motor insurance remained the business classes with the highest net retention ratios as shown in Figure 9 below. The lowest ratios continued to be recorded in health and aviation insurance.

Figure 9: Non-life Insurers' Average Retention Ratios for Different Classes of Business

Allied Insurance Company, Altfin Insurance Company, Hamilton Insurance Company, Regal Insurance Company and Tetrad Hail Insurance Company had the highest reinsurance creditors (outstanding reinsurance premiums) to reinsurance premium ratios of 531.55%, 415.40%, 412.21%, 380.16% and 333.50% respectively. These ratios were significantly above the industry average of 106.09%. Outstanding reinsurance premiums are not readily available to reinsurers and the reinsurers' will lose potential investment income from the same premiums. Such a situation may compromise the effectiveness of the reinsurance programme.

The industry average reinsurer's share of outstanding claims to gross outstanding claims ratio as at 31 March 2013 was 63.80%. This implies that for every \$1 of gross outstanding claims the insurers will recover on average \$0.63 from their respective reinsurer. While the ratio of 63.80% may signal the effectiveness of the reinsurance arrangements put in place by the non-life insurers in terms of settling outstanding claims, extremely high ratios of reinsurers' share of outstanding claims to gross outstanding claims may result in the manifestation of inherent credit and/or claim adjudication process.

If offsetting arrangements were to be put in place, the reinsurance arrangements in place may be nullified by high levels of reinsurance creditors which amounted to \$35.38 million as at 31 March 2013 compared with receivables from reinsurers of \$16.08 million.

1.6. Actuarial Liabilities

Generally the number of non-life insurers who did not provide for reserves in respect of incurred but not reported claims (IBNR) or unearned premium reserves (UPR) or both declined from eight (8) as at 31 December 2012 to four (4) as at 31 March 2013 (see Appendix 1B and 1C for the names of the specific institutions). This implies that these four institutions may have understated their liabilities thereby overstating their capital positions.

The average technical reserves to capital ratio was 82.62% as at 31 March 2013. The ratio below 100% implies that, insurers were on average holding adequate capital bases to support possible adverse events as at 31 March 2013, compared to their peers. The industry average outstanding claims plus IBNR to capital ratio was 35.90% as at 31 March 2013 meaning that on average the capital in the industry adequately covers all the outstanding claims and IBNR roughly 2.79 times.

1.7. Earnings

Notwithstanding the marginal decline in the volume of business written, the total profit after tax for the non-life insurers increased from \$1 million for the quarter ended 31 March 2012, to \$3.31 million for the quarter under review. The increase in profit after tax was mainly attributable to an increase in unrealized gains emanating from the marking to market of the investment portfolios as well as reduction in commission incurred which amounted to \$1.36 million and \$0.85 million respectively.

The increase in profit after tax for the sector translated into improvements in both the sectorial average return on assets (ROA) and return on equity (ROE) from 0.74% and 2.78% for the quarter ended 31 March 2012 to 1.91% and 6.07% for the quarter under review respectively. Although the direct short term insurers' sector reported a positive overall profit position, five insurers namely Tristar Insurance Company, Regal Insurance Company, Altfin Insurance Company, Sanctuary Insurance Company and Eagle Insurance Company recorded losses during the quarter under review.

Underwriting profits increased from \$1.82 million for the quarter ended 31 March 2012 to \$2.89 million for the quarter under review. Notwithstanding the increase in underwriting profits, the average combined ratio for the non-life insurers increased from 82.63% for the quarter ended 31 March 2012 to 88.20% reflecting deterioration in the profitability of the insurers' core business of underwriting. The deterioration in underwriting profitability is further indicated by the decline in underwriting margin from 17.37% for the quarter ended 31 March 2012 to 11.80% for the quarter under review. Further, there was a marked increase in claims which resulted in the deterioration of the loss ratio from 34.51% to 42.04%. Investment income accounted for only 3.73% of net premium written (NPW) indicating that the short term insurers are generating the bulk of their income from their core business of underwriting.

1.8. Liquidity

Total excess of current assets over liabilities (i.e. working capital) for the non-life insurers amounted to \$24.81 million as at 31 March 2013. The average current ratio for the industry was 122.76% which was above the benchmark of 100%.

The liquidity position of the non-life insurers as at 31 March 2013 was compromised by high levels of premium debtors which amounted to \$46.39 million relative to total current assets which amounted to \$107.54 million. Such high levels of premium debtors relative to total current assets resulted in the average acid test ratio of 80.21% as at 31 March 2013. This implies that if the current assets less premium debtors were to be used to settle current liabilities, out of every dollar of current liabilities, only about eighty cents will be settled.

1.9. Market Share for Non-life Insurers

Based on business written during the period under review, the non-life direct insurance sector was considered moderately concentrated with Herfindahl Indices¹ of 0.1 in terms of both gross premium written and net premium written. This implies the absence of a dominant insurer(s) in the market, a situation which guards against detrimental effects of monopolistic or oligopolistic markets. This position is at variance with the position reported as at 31 December 2012 wherein the sector was considered unconcentrated.

¹ The Herfindahl Index is the sum of squared market shares of firms in an industry. An index below 0.1 indicates an unconcentrated industry, an index of 0.1 to 0.18 indicates moderate concentration and an index above 0.18 indicates high concentration.

The change from being an unconcentrated sector to being a moderately concentrated industry is expected to leave the sector more or less the same given that the changes in the Herfindahl Indices from 0.08 and 0.09 in terms of gross premium written and net premium written respectively were very small.

As shown in the diagram below, Cell Insurance Company, Nicoz Diamond Insurance Company and RM Insurance Company were the top three insurers in terms of both gross premium written and net premium written with a combined market share of 46.42% and 45.99% respectively. Figure 10 below shows the market shares in terms of gross premium written and net premium written for the period under review.

Figure 10: Market Share for Insurers in Terms of GPW and NPW

As shown in Figure 11 below, in terms of assets, Cell Insurance Company Nicoz Diamond Insurance Company and Alliance Insurance Company were the market leaders with market shares of 13.75%, 11.93% and 11.50% respectively as at 31 March 2013.

Figure 11: Market Share for Insurers in Terms of Total Assets

SECTION B
2. REINSURANCE COMPANIES

2.1. Update on Number of Institutions

The number of registered reinsurers as at 31 March 2013 was ten (10), the same number reported as at 31 December 2012. Horizon Reinsurance Company was not yet operational and the Commission has since engaged the institution to find a way forward.

2.2. Trend and Distribution of Business Written

The volume of business generated by the non-life reinsurers in each first quarter since the inception of the multicurrency regime continued on the rebound, though at a slower pace between 2012 and 2013 as shown in Figure 12 below. Total gross premium written by the non-life reinsurers amounted to \$29.74 million for the quarter ended 31 March 2013, reflecting a 7.79% increase from \$27.59 million reported for the comparative period in 2012 as shown in table 4 below. The upsurge in total gross premium written was mainly driven by increases in gross premium written attributable to fire and motor insurance which amounted to \$2.15 million and \$0.69 million respectively.

Figure 12: Total Gross Premium Written in the First Quarters since 2010

Note: Total gross premium for the first quarter of 2009 has not been included since the multi-currency regime was introduced when the quarter was already underway

Total gross premium reported by reinsurers was below reinsurance premium reported by direct insurers which amounted to \$33.35 million. This is attributable to placement of business by non-life insurers directly to markets outside Zimbabwe as well as the writing of business by local reinsurers from other markets outside Zimbabwe. Compared to the quarter ended 31 March 2012, less premium was ceded to retrocessionaires, a situation which resulted in a higher percentage growth in business retained on the reinsurers' books as shown in table 4 below.

Table 4: Business Written (\$000)

	31-Mar-12	31-Mar-13	% Change
Gross Premium Written	27,592	29,742	7.79%
Retrocession Premium	7,713	6,801	-11.82%
Net Premium Written	19,879	22,940	15.40%
Net Earned Premium	13,935	17,329	24.36%

As shown in Table 5 below, bonds and marine insurance recorded the highest percentage growths of 167.10% and 62.56% respectively, compared to other business classes. Reinsurers should insist on sound underwriting by insurers in bonds/guarantees insurance since this class of business has resulted in huge losses to some insurers who in turn recover part of their losses from reinsurers. The highest percentage decreases in business were recorded in hail and health insurance.

Table 5: Gross Premium Written by Class of Business (\$000)

Class	31-March-12	31-March-13	% Change
Aviation	1,015	989	-2.55%
Bonds/Guarantee	166	443	167.10%
Engineering	1,774	1,706	-3.82%
Farming	2,550	1,318	-48.30%
Fire	9,928	12,076	21.63%
Hail	478	0	-100%
Health	275	46	-83.41%
Hire Purchase	23	32	43.64%
Marine	453	737	62.56%
Miscellaneous Accident	4,304	4,898	13.81%
Motor	5,163	5,850	13.30%
Personal Accident	1,138	1,461	28.37%
Personal Liability	325	186	-42.71%
Total	27,592	29,742	7.79%

As shown in Figure 13 below, fire and motor remained the dominant classes of business contributing 40.6% and 19.67% of total gross premium written for the quarter ended 31 March 2013 respectively. Given the distribution of business across different classes of insurance as shown in Figure 13 below, concentration risk was considered moderate.

Figure 13: Distribution of Reinsurers GPW by Business Class

2.3. Capitalization

The short term reinsurance sector was generally considered safe in terms of capitalization as at 31 March 2013. All the operational reinsurers except New Reinsurance Company (Private) Limited, reported capital levels which were compliant with the minimum capital requirement of \$750,000 effective 30 June 2013. As shown in Table 6 below, of all the reinsurers who reported capital levels which were above \$750,000, only Colonnade Reinsurance Company reported a capital position which was below \$1.5 million effective 30 June 2014.

During the quarter under review, Colonnade Reinsurance Company, ZB Reinsurance Company and PTA Reinsurance Company's country office received capital injections from their respective shareholders hence the significant increases in capital positions from those reported as at 31 December 2012 shown in the table below.

The Zimbabwe Association of Reinsurance Offices (ZARO) has resolved that its members should have a minimum capital requirement of \$2 million. The proposals have since been lodged with the Commission, which has considered them and is agreeable to the same. Going forward the Commission will be considering coming up with a Statutory Instrument in respect of the proposed minimum capital requirements to enable enforceability of the same.

Table 6: Reported Capital Levels for Reinsurers (\$)

Company	31 Dec 2012	31 March 2013
Baobab Reinsurance Company	28,264,139	27,940,533
Colonnade Reinsurance Company	707,106	1,182,012
FBC Reinsurance Company	7,094,525	7,476,360
FMRE Property & Casualty	5,108,325	5,255,917
Grand Reinsurance Company	9,804,037	9,850,732
New Reinsurance Company	551,000	507,000
Tropical Reinsurance Company	2,393,000	2,030,220
ZB Reinsurance Company	3,446,000	6,289,580
PTA Reinsurance Company (Zep Re)*	983,000	1,728,362

*The capital position only relates to ZEP Re's Zimbabwe country office. The audited capital position for Zep Re as at 31 December 2012 was \$78.77 million.

Key:

	The reinsurer had already complied with the minimum capital requirement of \$1.5 million effective 30 June 2014.
	The reinsurer had complied with the minimum capital requirement of \$0.75 million effective 30 June 2013, but is yet to comply with \$1.5 million effective 30 June 2014.
	The reinsurer had not complied with the minimum capital requirement of \$0.75 million effective 30 June 2013.

On average the reinsurers reported capital levels which were significantly above the minimum capital requirements as reflected by the average capital maintenance ratio of 461.19% which was significantly above the prudential benchmark of 100%. In line with their low capital levels compared to the regulatory minimum, New Reinsurance Company and Colonnade Reinsurance Company, reported capital maintenance ratios of 33.80%, and 78.80% respectively which were below 100% (see Appendix 2C for capital maintenance ratios in respect of all reinsurers).

As shown in the table below, all operational reinsurers were compliant with the minimum solvency margin of 25% stipulated in *section 24(1a) (ii) of the Insurance Act [Chapter 24:07]* as at 31 March 2013. The average solvency margin for the short term reinsurers was 90.09%, reflecting an improvement from 84.05% reported as at 31 December 2012.

Figure 14: Solvency Margin for Reinsurers

Tropical Reinsurance Company, Colonnade Reinsurance Company and New Reinsurance Company had low equity to assets ratios compared to their peers as shown in Figure 15 below. Such low ratios indicate that the said reinsurers had more reliance on external funding and may lead to solvency problems in the future. The same reinsurers mentioned above also reported the lowest total capital to liabilities ratio as at 31 March 2013, compared to their peers. This means that compared to their peers, these reinsurers had less capital in relation to their liabilities.

Figure 15: Leverage Ratios for Reinsurers

2.4. Asset Quality

As shown in Figure 16 below, total assets for the non-life reinsurers have been on an upward trend since the adoption of the multicurrency regime in 2009. The upward trend was mainly driven by increases in the volume of business generated over the years, coupled with fresh injection of capital by shareholders.

During the quarter under review total assets increased by 11.32% from \$106.95 as at 31 December 2012 to \$119.16 million as at 31 March 2013. The change in total assets during the quarter under review was largely attributable to the increase of \$10.62 million in cash and cash equivalents which in a way improved the non-life reinsurance industry's liquidity position.

Figure 16: Quarterly Trend in Total Assets for Non-life Reinsurers since 2009

The asset base for non-life reinsurers, as at 31 March 2013 was skewed towards current assets, which accounted for 45.85% of total assets as shown in Figure 17 below. The current assets were mainly made up of premium debtors which accounted for 43.63%.

Figure 17: Breakdown of Non-life Reinsurers' Total Assets

The quality of assets for the non-life reinsurers in terms of generation of income deteriorated during the quarter under review as evidenced by the decrease in the average investments to assets ratio from 53.22% as at 31 December 2012 to 42.92% as at 31 March 2013. The decline in the average investments to assets ratio may imply the reduction of the profitability of the assets in terms of income generation. The deterioration in the asset quality is further shown by the increase in the average non-profitable assets to total assets ratio from 37.27% as at 31 December 2012 to 39.61% as at 31 March 2013. The indicators of profitability of assets for each reinsurer are shown in Figure 18 below.

Figure 18: Indicators of Profitability of Assets of Non-Life Reinsurers

The industry average premium debtors to assets ratio decreased marginally from 20.83% as at 31 December 2012 to 20% as at 31 March 2013. Such a ratio is significantly below the prudential limit of 5% stipulated by Circular 2 of 2013. Colonnade Reinsurance Company and New Reinsurance Company reported the highest ratios of premium debtors to total assets of 65.93% and 43.80% respectively as at 31 March 2013. High ratios of premium debtors to assets may compromise the quality of the reinsurer's asset base. (See Figure 19 for all reinsurers' premium debtors to assets ratios).

The average premium debtors to gross premium written was 80.07% as at 31 March 2013. Grand Reinsurance Company and Colonnade Reinsurance Company reported the highest premium debtors to gross premium written ratios of 185.37% and 159.28% respectively compared to other reinsurers (see figure 19 below). These ratios in excess of 100% imply that the two reinsurers had premium debtors in respect of business written prior to 1 January 2013. The longer the age of premium debtors the more the doubts on the recoverability of the same debtors.

Figure 19: Premium Debtors to GPW and Premium Debtors to Assets Ratios

Note: The ratio for Zep Re in respect of both premium debtors to gross premium and gross premium to assets is 0% and is not shown in the diagram.

2.5. Retrocession

The non-life reinsurers reported an average retention ratio of 77.13% for the quarter ended 31 March 2013, compared to 72.52% reported in the comparative period in 2012, reflecting an increase in risk appetite. As shown in Figure 20 below, the retention ratios for individual insurers ranged from 54.43% to 89.33%.

Figure 20: Retention Ratios for Reinsurers

An analysis of the quarterly returns submitted by the reinsurers indicates that most of the reinsurers' premium remittances to retrocessionaires were not up to date with the industry average retrocession creditors to retrocession premium being 198.64% as at 31 March 2013. Compared to their counterparts, Baobab Reinsurance Company and FBC Reinsurance Company reported the highest ratios of retrocession creditors to retrocession premium of 570.84% and 244.90% respectively. High levels of outstanding premium to retrocessionaires may compromise the enforceability of the retrocession arrangements if there are no credit terms agreed between the reinsurers and their retrocessionaires. Retrocession creditors to gross premium written in excess of 100% imply that there are outstanding premiums in respect of business written prior to the quarter under review.

Out of all the business classes, bonds/guarantees and farming insurance recorded the lowest premium retention ratio of 27.73% and 31.41% respectively during the quarter under review. Figure 21 below shows the retention ratio in different classes of business for the quarter ended 31 March 2013.

Figure 21: Reinsurers' Retention Ratios by Class of Insurance Business

The industry average retrocessionaires' share of outstanding claims to gross outstanding claims ratio as at 31 March 2013 was 64.84%. This implies that for every \$1 of gross outstanding claims the reinsurers will recover on average \$0.65 from their respective retrocessionaires.

2.6. Actuarial Liabilities

The Commission has noted with comfort that all non-life reinsurers provided for reserves in respect of Incurred but not reported claims as well as unearned premiums as at 31 March 2013.

The industry average of technical reserves to capital ratio was 51.53% which was within the benchmark of 100%. Since the ratio was below 100%, it can be concluded that, assuming that there were no cases of under reserving, the non-life reinsurers' industry, on average, had adequate capital to support possible adverse events as at 31 March 2013. However, Tropical Reinsurance Company and FBC Reinsurance Company reported technical reserves to capital ratios of 143.40% and 129.12% respectively which were above 100% implying that their capital bases may not be able to withstand possible adverse events.

2.7. Earnings

Non-life reinsurers reported profit after tax of \$3.03 million for the quarter ended 31 March 2013, reflecting a 27.79% increase from \$2.37 million reported in the comparative period in 2012. The increase in total profit for the reinsurers was mainly attributable to the decrease in unrealized losses arising from marking to market of investment portfolios as well as reduction of operating expenses which amounted to \$1 million and \$0.65 million respectively. The increase in profit after tax resulted in improvements in both the average return on assets (ROA) and return on equity (ROE) from 2.31% and 3.96% for the quarter ended 31 March 2012 to 2.55% and 4.87% for the quarter under review respectively. All the non-life reinsurers reported profits during the quarter under review.

Total underwriting profits for the reinsurers decreased from \$2.88 million for the quarter ended 31 March 2012 to \$2.73 million for the quarter under review. Although absolute figures for underwriting profits decreased the underwriting margin for the reinsurers improved from 11.12% for the quarter ended 31 March 2012 to 15.72% for the quarter under review. In addition, the combined ratio improved from 88.88% to 84.28%. The improvement in the combined ratio was mainly attributable to the decrease in expense ratio from 32.96% for the quarter ended 31 March 2012 to 21.79% for the quarter under review. The improvements in the underwriting margin and combined ratio reflects enhanced profitability of the reinsurers' core business of underwriting. Investment income accounted for only 3.50% of net premium written (NPW) indicating that the non-life reinsurers are generating the bulk of their income from their core business of underwriting.

2.8. Liquidity

The total working capital for the reinsurers amounted to \$16.54 million as at 31 March 2013. Of all the operational reinsurers, only two reported negative working capital position namely, Baobab Reinsurance Company and New Reinsurance Company. The industry average current ratio was 132.22% as at 31 March 2013. The average acid test ratio for the reinsurers was 85.82% as at 31 March 2013. The huge difference between the current ratio and the acid test ratio was attributable to high levels of premium debtors.

New Reinsurance Company, Colonnade Reinsurance Company and Tropical Reinsurance Company reported the lowest acid test ratios of 23.60%, 36.67% and 45.39% respectively. Low acid test ratios imply that the reinsurers may face challenges should there be need to use their current assets to meet current liabilities, compared to their counterparts.

2.9. Market Share for Reinsurers

The market for non-life reinsurers was considered moderately concentrated with Herfindahl Indices of 0.15 and 0.16 in terms of gross premium written and net premium written during the quarter under review. The top three reinsurers in terms of gross premium written were Baobab Reinsurance Company, FMRE Property and Casualty and FBC Reinsurance Company as shown in Figure 22 below. In terms of net premium written, Baobab Reinsurance Company, FBC Reinsurance Company and ZB Reinsurance remained the top three reinsurers.

In terms of total assets, Baobab Reinsurance Company, FBC Reinsurance Company and FMRE Property and Casualty were the top three reinsurers with a combined market share of 66.58% as shown in Figure 22 below.

Figure 22: Market Share for Reinsurers in Terms of GPW, NPW and Total Assets

SECTION C

3. INSURANCE BROKERS

3.1 Update on Number of Insurance Brokers

There were thirty (30) registered insurance brokers, as at 31 March 2013. The Commission lifted the suspension of Aon Zimbabwe (Private) Limited's subsidiaries from writing new business following strides made in regularizing their operational status. Meanwhile the subsidiaries have since submitted their applications to enable their registration.

3.2 Business Written

Total gross premium written by both insurance and reinsurance brokers for the quarter ended 31 March 2013 amounted to \$31.7 million compared to total nonlife insurers' gross premium of \$66.68 million. Comparison with business generated for the quarter ended 31 March 2012 could not be made since there were no statistics compiled for the same quarter.

Table 7: Statement of comprehensive Income for Insurance Brokers (\$000)

Indicator	31 March 2013
Gross Premium Receivable	31,700
Gross premium Payable	27,341
Net Brokerage Commission	4,244
Management Expenses	3,867
Profit Before Tax	738
Taxation	123
Profit Before Tax	615

3.3 Distribution of Gross Premium Written by Business Class

During the quarter under review motor and fire insurance contributed more business in terms of gross premium written compared to other business classes. The two business classes contributed 47.64% and 16.53% of gross premium respectively. Figure 23 below shows the distribution of business by business class.

Figure 23: Distribution of Insurance Brokers' Gross Premium Written by Business Class

3.4 Earnings for Insurance Brokers

Insurance brokers reported total profit after tax of \$0.62 million for the quarter ended 31 March 2013. The industry's average return on equity (ROE) and return on assets (ROA) for the insurance brokers for the period under review was 6.47% and 1.84% respectively.

3.5 Capitalization

As at 31 March 2013, of all the registered insurance brokers, only four reported capital positions which were below \$100,000. The Commission will engage the four brokers with a view to having them regularize their capital position. The median capital position was \$182,000.

Table 8: Reported Capital Levels for Insurance Brokers (\$ 000)

Broker	31 Dec 2012	31 Mar 2013
Alexander Forbes Risk Services Zimbabwe (Private) Limited	353	339
Ambassador Insurance Brokers	146	117

TIB Insurance Brokers	58	108
Victory Insurance Brokers (Private) Limited	348	419
Zimbabwe Insurance Brokers Limited	256	300

3.6 Asset Quality

Total assets decreased marginally from \$33.47 million as at 31 December 2012 to \$33.41 million as at 31 March 2013. The total assets remained skewed towards current assets which accounted for 79.08% as shown in Figure 22 below. The current assets were mainly made up of, commission receivable, and cash & cash equivalents which amounted to \$14.52 million and \$6.87 million and contributed 43.38% and 20.53% of total assets respectively.

Figure 24: Breakdown of Insurance Brokers' Total Assets as at 31 March 2013

3.7 Market Share for Insurance Brokers

The market leaders in terms of premium written during the quarter under review were Pan African Reinsurance Brokers, Aon Zimbabwe (Private) Limited, and Navistar Insurance Brokers with market shares of 13.14%, 9.88% and 7.23% respectively. Aon lost its market leadership as a result of its suspension from writing new business which was eventually lifted during the quarter under review. Figure 25 below shows the market shares for different insurance brokers.

Figure 25: Market Share for Insurance Brokers in Terms of Premium Written
