Economic Overview

2 ECONOMIC OVERVIEW

A Snapshot of Resilience and Challenges

2.1 Introduction

The second quarter of 2024 has been a pivotal period for the Insurance and Pension sector in Zimbabwe, as this was marked by the introduction of the new currency, the Zimbabwe Gold (ZiG). This momentous change has sent ripples throughout the economy and has had a profound impact on the insurance and pension landscape. In this introductory overview, we explore the major developments and challenges faced by the sector during this period, with a particular focus on the ramifications of the ZiG's introduction.

2.2 Impact of the ZiG on the Sector

2.2.1 Currency Conversion and Revaluation

The immediate challenge for the sector was the need for resources to convert assets and liabilities from Zimbabwean dollars to ZiG. This process required meticulous revaluation and recalculation of policy benefits, premiums, and reserves. The process called for accuracy to avoid prejudicing policyholders to maintain policyholder trust and ensuring the financial stability of insurers and pension funds.

2.2.2 Policyholder Confidence

The introduction of a new currency naturally raised concerns among policyholders about the value and security of their policies. Insurers and pension funds have been actively communicating with policyholders to inform and provide reassurance about the protection of their investments.

2.2.3 Investment Strategies

The ZiG introduction has prompted a reassessment of investment strategies for insurance companies and pension funds. The search for stable, inflation-

hedging investments has become paramount to safeguard the long-term interests of policyholder funds.

The introduction of the ZiG has presented both challenges and opportunities. The sector's ability to navigate the complexities of currency conversion, maintain policyholder confidence, and adapt investment strategies will be critical for its resilience and growth. As the economy continues to adjust to the ZiG, ongoing monitoring and strategic decision-making will be essential for the sector's success in the coming months and years.

2.3 Stock Market Performance:

a) Zimbabwe Stock Exchange

The ZSE's Q2 2024 performance presents a mixed outlook for the insurance and pension sector. While market volatility and changing foreign investor sentiment pose challenges, the overall growth in market capitalization and potential long-term opportunities warrant careful consideration. Insurance and pension funds should adopt prudent risk management strategies and maintain a long-term investment perspective to navigate this dynamic market environment successfully.

b) Victoria Falls Exchange

The VFEX performance during Q2 2024 presented a mixed picture, with both opportunities and challenges for the insurance and pension sectors. While foreign investor interest signals positive prospects, the volatile market conditions emphasize the need for prudent risk management and a long-term investment approach.

*No complaints were received from AFC, ECGC, Quality and Safel Insurance. Empaya has been excluded on account of non-submission of returns.

- 9.1.6 The Complaints ratio is an important tool that helps insurers in addressing consumer concerns. In some instances, the publication of the complaints index helps insurers to address consumer complaints when their ratios go above those of comparable companies (Morris, Wood, & Pierce, 2011). Research shows that insurers with high complaint ratios write high-risk businesses whilst insurers with lower complaints ratios spend significantly less on legal and auditing expenses (Carson, McCullough, & Russell, 2005).
- 9.1.7 The computation of the complaints index will also be important to the Commission in as far as targeted inspections on market conduct are concerned. The index also helps consumers to signal inferior service.
- 9.1.8 For the half year ended 30 June 2024, the average complaints index for the short-term insurers was 2.2. This ratio suggests that complaints are essentially moderate within the short-term industry. Insurers should view this ratio as a signal to timely resolve complaints, identify areas for improvement, and take proactive steps to address customer concerns. Allied, Clarion, Credsure, Econet and Champions had the highest complaints ratios at 9.52; 7; 6; 4.5 and 3.4 respectively.
- 9.1.9 A ratio of 1, for example, means the insurer has the same percentage share of complaints as its percentage share of insurance revenue. A ratio of 1.50, means the insurer has a 50% higher share of complaints when compared to its share of insurance revenue.
