Section B | Economic Overview

2 ECONOMIC OVERVIEW

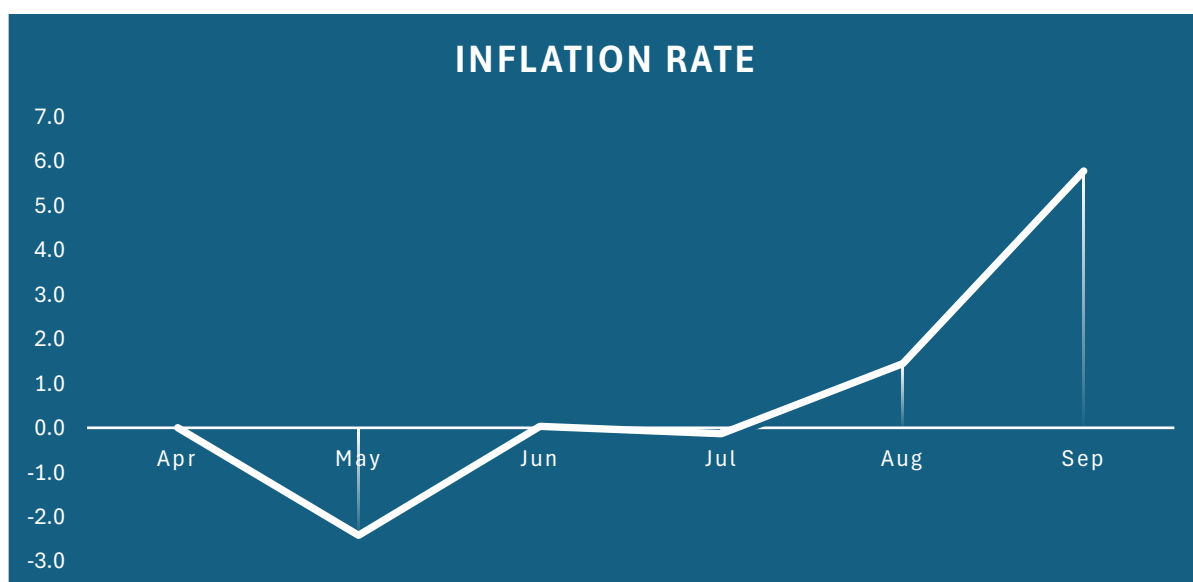

2.1 Economic Outlook

2.1.1 The International Monetary Fund (IMF) has projected a slowdown in Zimbabwe's economic growth for 2024 from an initial forecast of 3.5% to 2%. This downward revision is primarily attributed to the adverse effects of the El Niño weather phenomenon on agricultural output. The mining sector is also expected to experience subdued growth due to low international mineral prices. However, a rebound in agricultural production and ongoing capital projects in the manufacturing sector are anticipated to drive recovery in 2025.

2.2 Inflation Developments

2.2.1 In April 2024, Zimbabwe introduced the Zimbabwe Gold (ZiG) currency as part of efforts to stabilize the economy and curb inflation. The ZiG is pegged to the gold price and is meant to be a store of value. The introduction of the ZiG resulted in the country experiencing varying inflation trends as shown in Figure 1-1 below.

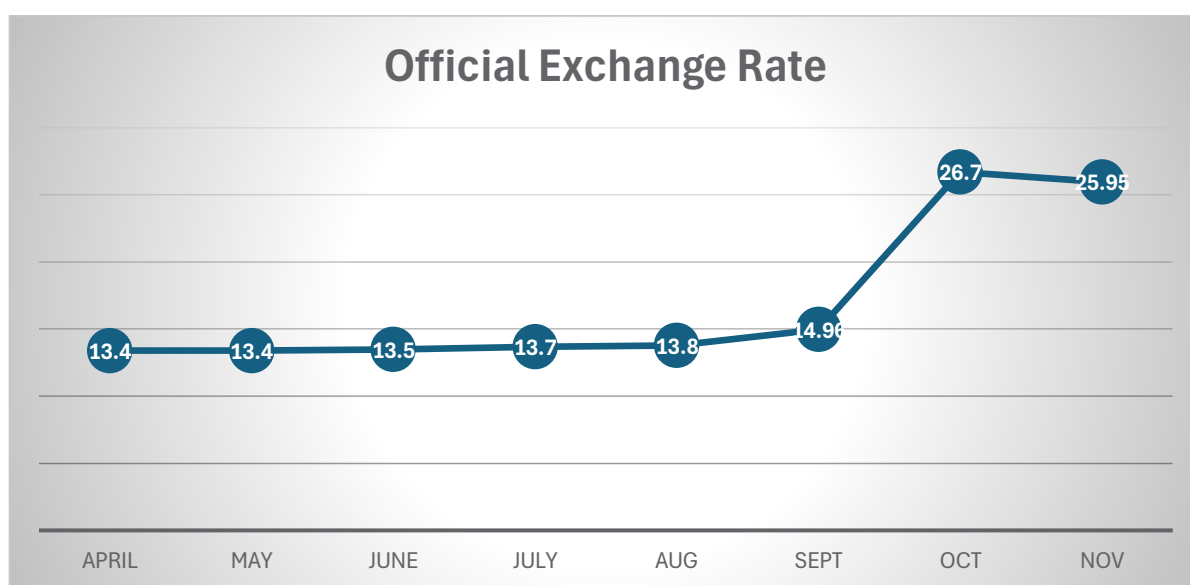

Figure 2-1: Inflation Trend: April – September 2024

2.3 Exchange Rate Developments

2.3.1 Figure 2-2 shows that the introduction of the ZiG significantly impacted the exchange rate dynamics, with the exchange rate stability having been witnessed during the first five months following the launch of the ZiG. This notwithstanding, speculation and currency trading contributed in causing exchange rate volatility in the third quarter, culminating in a 44% devaluation of the ZiG. Maintaining exchange rate stability is crucial for the insurance and pensions sector, as it fosters confidence and long-term investment.

Figure 2-2: Exchange Rate Movements

2.4 Stock Market Performance

(a) Zimbabwe Stock Exchange (ZSE)

2.4.1 Market capitalization of the ZSE increased steadily from ZiG28.6 billion in April to ZiG74.5 billion in September 2024, indicating growing investor interest and confidence. The growth was driven by improved corporate performance and economic stability ushered by the introduction of the ZiG.

- **Turnover:** Market turnover showed significant growth, from ZIG16.6 million in April to ZIG273.9 million in September 2024, demonstrating increased trading activity and liquidity.

- **All-Share Index:** The All-Share Index, a key indicator of overall market performance, experienced significant growth during the period. This reflects the positive performance of most ZSE listed companies.

(b) Victoria Falls Exchange (VFEX)

- 2.4.2 Market capitalization for the VFEX experienced mixed performance throughout the period. This suggests that investor sentiment and market dynamics were influenced by various factors, including economic conditions, currency stability, and global events during the period under review.
- 2.4.3 The turnover also showed fluctuations, indicating varying levels of trading activity. The VFEX All Share Index exhibited a relatively stable trend, with some periods of growth and some of decline. This suggests that the overall performance of listed companies on the VFEX was mixed.

The background image shows a blue car that has been involved in a collision, with its front end crumpled. In the foreground, a red and orange warning triangle is partially visible, suggesting a road safety or accident scene. The text is overlaid on a dark blue semi-transparent banner at the bottom.

Section C | SHORT-TERM
INSURANCE ARCHITECTURE

3 SHORT-TERM INSURANCE ARCHITECTURE

3.1 The Architecture of the Short-Term Insurance Industry

- 3.1.1 There were five hundred and sixty-one (561) registered entities/persons in the short-term insurance industry as at 30 September 2024. This represented a 56% decrease from one thousand two hundred and eighty-one (1,281) registered players/persons as at 30 September 2023.
- 3.1.2 The decrease is attributed to a licence verification exercise undertaken by the Commission. All insurers were requested to submit their list of agents, in terms of section 17(2) of the Insurance Regulations S.I 49 of 1989 as amended, and this resulted in seven hundred and twenty (720) agent licences being deemed invalid. This was because the agents had either stopped representing the insurer or their licences had expired and were not renewed.
- 3.1.3 The architecture of the industry is shown in Table 3-1:
