Section B | Economic Overview

2 ECONOMIC OVERVIEW

2.1 Economic Overview Q4 2024

2.1.1 Q4 2024 was a period of relative stabilization for the Zimbabwean economy, particularly regarding inflation and exchange rates. Tight monetary policy, while creating some liquidity challenges, appears to have been effective in achieving its primary goals. The Reserve Bank took steps to address liquidity issues and continued to focus on deepening the Willing - Buyer Willing - Seller (WBWS) market and accumulating reserves. The foundation laid in Q4 2024 is expected to support economic growth in 2025.

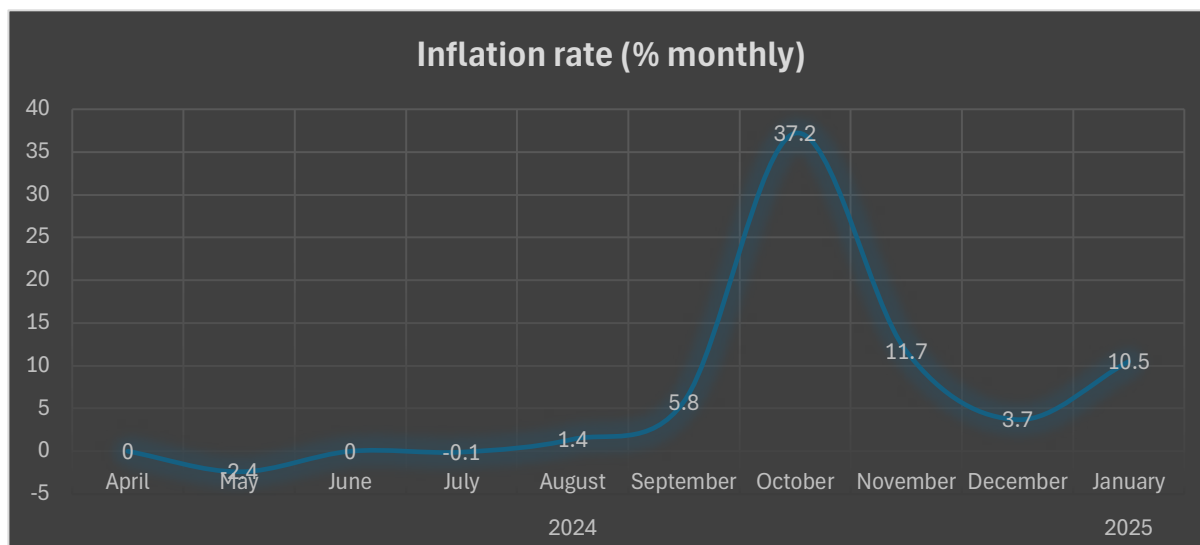

2.2 Domestic Macro-Prudential Analysis:

2.2.1 Q4 2024 saw the economy experiencing inflation and exchange rate stability. This stability is attributed to the tight monetary policy stance maintained by the Reserve Bank of Zimbabwe during the quarter, including upward reviews of the Bank Policy Rate and statutory reserve requirements. Greater exchange rate flexibility in the interbank market, anchored by tight monetary conditions, also contributed. Strategic foreign exchange interventions by the Reserve Bank helped clear the market and ensure smooth foreign exchange flow. However, this tight monetary policy led to some temporary liquidity challenges, which the Reserve Bank addressed through an intra-day facility for banks and planned disbursements under the Targeted Finance Facility (TFF).

2.3 Inflation Developments:

2.3.1 Monthly ZWG inflation moderated in Q4 2024 due to tight monetary conditions. The data in Figure 2-1 showed a downward trend in inflation:

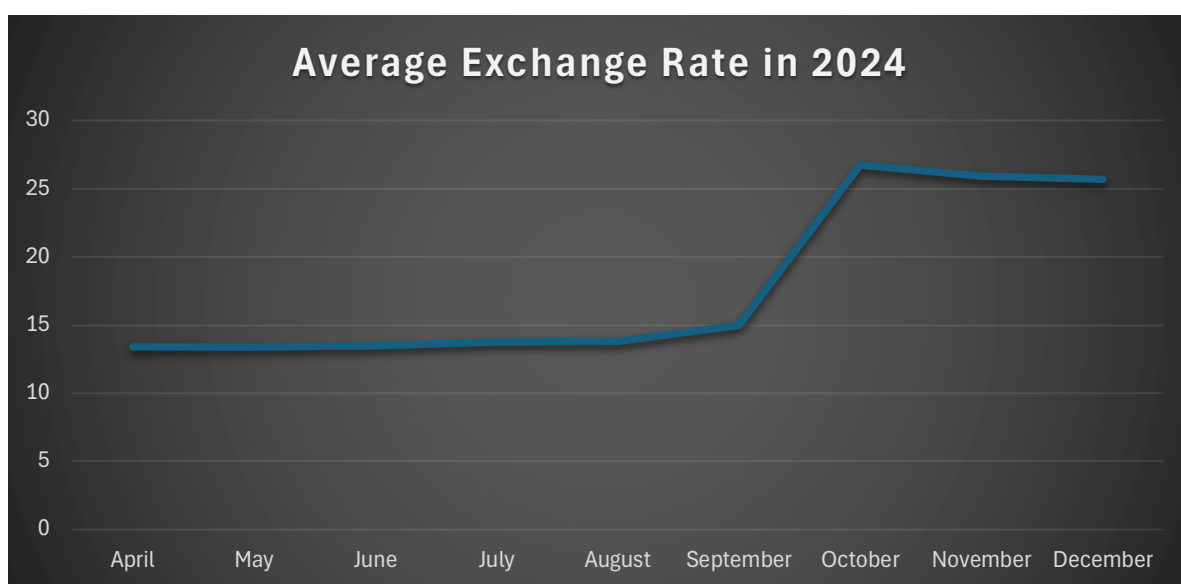

Figure 2-1: Monthly Inflation Developments April 2024 – January

2.4 Exchange Rate Developments:

2.4.1 The exchange rate stabilized in Q4 2024 following monetary policy measures implemented in late September. This stability is reflected in the narrowing of exchange rate premiums. The Reserve Bank deepened the Willing-Buyer Willing-Seller (WBWS) for foreign exchange interbank market to enhance price discovery and market efficiency. Figure 2-2 below shows the data:

Figure 2-2 Average Exchange Rates from April to December 2024

2.5 Stock Market Development (ZSE)

(a) Zimbabwe Stock Exchange (ZSE)

2.5.1 The introduction of the ZWG currency in 2024 significantly influenced the Zimbabwe Stock Exchange (ZSE) performance between April and December 2024, resulting in these key trends:

- **Market Capitalization:** The market capitalization of the ZSE increased steadily from 28.6 billion in April to 66.24 billion in December 2024,
- **Turnover:** The turnover on the ZSE also showed significant growth, from ZWG16.6 million in April to ZWG 225.4 million in December 2024,
- **All-Share Index:** The All-Share Index, a key indicator of overall market performance, experienced a period of growth followed by a decline. The data indicated significant volatility in the ZSE All Share Index during the period between April to December 2024.

(b) Victoria Falls Stock Exchange Market (VFEX):

2.5.2 Information on specific VFEX performance in Q4 2024 is provided below as follows:

- **Market Capitalization:** The market capitalization of the VFEX increased from 1.207 billion in December 2023 to 1.279 billion in December 2024,
- **Turnover:** The turnover on the VFEX also showed significant growth, from US\$4.821 million in December 2023 to US\$19.704 million in December 2024.

Section C | SHORT-TERM INSURANCE ARCHITECTURE

3 SHORT-TERM INSURANCE ARCHITECTURE

3.1 The Architecture of the Short-Term Insurance Industry

3.1.1 There were six hundred and twenty-nine (629) registered entities/persons in the short-term insurance industry as at 31 December 2024. This represented a 52% decrease from one thousand three hundred and ten (1,310) registered players/persons as at 31 December 2023.

3.1.2 The decrease is attributed to a licence verification exercise undertaken by the Commission in 2024 which resulted in deregistrations. The architecture of the short-term industry is shown in Table 3-1 below:

Total	6,176.73	239.42	225.44	6%

Others include inventory, related party receivables and investments in associated companies.*

4.7.2 The increase in assets is mainly attributable to short-term investments and reinsurance contract assets which increased by 1,007% and 108% respectively.

4.7.3 Insurance contract assets and reinsurance contract assets amounted to ZWG561.51 million (US\$21.77 million) and ZWG1.66 billion (US\$64.27 million) respectively.

4.7.4 Reinsurance Contract Assets and Investment Property were the two major asset classes, accounting for a combined 43% of total assets.

4.7.5 Reinsurance Contract Assets constituted 27% of the total assets, which poses counterparty credit risk, the insurance industry relying on reinsurers to pay claims, if reinsurers default, delays payments, or face insolvency, the insurers may struggle to meet their obligations.

4.7.6 Investment property alone constituted 16%, against a limit of 10% as stipulated in the IPEC Investment Guidelines issued in terms of Circular 2 of 2013.

4.7.7 The short-term sector is maintaining 7% cash and bank balances, which is below the 20% upper limit. Other liquid assets (money markets investments and other short-term investments) were way below the 70% upper limit for money markets, indicating that the industry may face liquidity risk if high claim payouts or unexpected financial shocks are experienced by the industry. Insurers must ensure sufficient liquidity buffers to handle unexpected claims or market downturns.

4.8 Prescribed Assets

4.8.1 Total investments in prescribed assets by the short-term insurers amounted to ZWG362 million (US\$14.03 million) translating to an average compliance level of 9%.

4.9 Insurance Contract Liabilities
